

## Lock in safe climate policies

NEW COAL

NEW OIL

NEW GAS

NEW LOGGING

We need to rapidly transition to a zero carbon economy, and draw down billions of tonnes of CO2 from the atmosphere, so it makes no sense to allow any new projects that put us at greater climate risk, particularly in sectors where climate-safe alternatives are readily available.

## Victorian 2018 state election candidate survey

Tick all items that you agree with below:

- 1. We are in a climate emergency, with climate impacts already causing heat stroke, starvation, loss of life, and massive ecosystem destruction.
- 2. The Victorian government has a duty of care to make every effort to protect us all from dangerous climate impacts.
- 3. I support a legislative ban in Victoria on all new projects that contribute to global warming, applicable immediately in sectors where climate-safe alternatives are available.
- 4. In sectors where an immediate ban would not be possible, I support a rapid phase-in, in Victoria, of bans on new projects that contribute to global warming.
- 5. I support a legislative ban on any new coal, oil, and gas projects in Victoria.
- 6. I support a legislative ban on any new fossil fuel infrastructure projects in Victoria.
- 7. I support a legislative ban on any new logging projects in Victoria's native forests.
- 8. I support government decisions that give market certainty for the roll-out of renewable energy and other climate-safe alternatives in Victoria.

**I will publicly support the following climate-related policies during my election campaign:**

(Enter the number of one or more of the above items or write your own climate-related policy below.)
